Minimum Wages and Fast Food Employment: Evidence from New Jersey

Research Team

October 16, 2026

1 Introduction

In 1992, New Jersey increased the minimum wage. We estimate the employment effect [claim:c-did] [1].

2 Empirical Results

The estimated difference-in-differences employment effect is 3.00 with standard error 0.45.

Estimate	3.00
SE	0.45
